

Assignment 4 Design Process Document

Student Information

Name: Sophie Williams

Course: MART341.50-70801

Assignment: Assignment 4

Date: September 2026

Project Idea

My website is about my three favorite cats: Honey, Maple, and Bennie. I wanted the site to feel friendly, simple, and personal. Each cat has a different personality, so I used the website to introduce them and share some of their favorite activities.

The site includes a home page, a Cat Info page, and a components page. The Cat Info page includes a personality table and a photo gallery. The Components page shows the reusable parts of the design, including cat cards, icons, a form, a table, and a gallery.

Design Goals

My main goal was to create a website that is easy to understand and enjoyable to look at. I wanted visitors to quickly learn who the three cats are without having to search through too much information.

I also wanted the design to feel consistent. I repeated the same colors, fonts, borders, spacing, and rounded shapes throughout the pages so that everything would look like it belonged together.

Design Principles

I used hierarchy by making the main page titles and section headings larger than the regular text. The cat names are also easy to notice, which helps visitors understand how the information is organized.

I used alignment by keeping the main content centered and lining up the cat cards, table, form, and gallery. Flexbox helped me arrange the gallery images into neat rows and allowed them to wrap on smaller screens.

I used pattern by repeating the same structure for each cat. Each cat has a name, image, description, and favorite activity. Repeating this format makes the information easier to follow.

I used continuity by keeping the same colors, fonts, rounded corners, and spacing throughout the site.

Color Choices

I used different shades of pink as the main colors for the website. Pink gives the site a warm, friendly feeling and works well with the cat theme. I also used white backgrounds to make the content easier to read.

I used darker text for contrast and light borders to separate sections without making the design feel too heavy. The rounded corners and soft colors help create a simple and welcoming appearance.

Typography

I used Bree Serif for the headings because it has a playful style that fits the personality of the website. I used Nunito Sans for the body text because it is clean and easy to read.

Using two different fonts helps separate the headings from the regular content while keeping the design consistent.

Icons

I designed six icons for the website: a cat face, paw print, sun, compass, cushion, and heart. The cat face and paw print represent the overall cat theme. The sun represents Honey because she likes sitting somewhere warm. The compass represents Maple because she is curious and adventurous. The cushion represents comfort, and the heart represents Bennie because he is friendly and cuddly.

I kept the icons simple by using clear shapes, limited colors, and recognizable designs. This helps them stay readable and keeps them from distracting visitors from the main content.

Components

The website includes several reusable components. These include the navigation bar, cat cards, survey form, personality table, photo gallery, icons, and footer.

The cat cards introduce each cat in the same format. The form gives visitors a way to interact with the site. The table makes it easier to compare the cats, and the gallery adds a visual way to learn more about them.

Form Design

The goal of the form is to let visitors share information about themselves and their cats. It includes fields for a name, email address, cat name, favorite featured cat, personality type, and newsletter subscription.

I used labels, spacing, borders, a field set, and a legend to keep the form organized. I also grouped related questions together so the form would be easier to complete.

Table Design

The table organizes each cat's personality and favorite activity. A table was appropriate because it allows visitors to compare Honey, Maple, and Bennie quickly.

I used clear column headings, borders, spacing, and alternating row colors to make the information easier to read.

Gallery Design

The gallery displays photos of Honey, Maple, and Bennie. It supports the website's goal by giving visitors a visual introduction to the cats.

I used Flexbox to arrange the images in rows. The gallery wraps when the screen becomes smaller and changes to a single-column layout on mobile devices. This keeps the photos organized and easy to view.

Responsive Design

I used responsive media queries so the website would work on desktop computers, tablets, and phones. The layout changes when the screen gets smaller, and the gallery images stack vertically on mobile screens.

Flexbox also helps the cat cards and gallery adjust to different screen sizes.

Reflection

I learned that design choices work together to affect how a website feels and how easy it is to use. I became more comfortable using hierarchy, alignment, color, typography, and pattern.

I also learned more about creating reusable components such as cards, forms, tables, galleries, buttons, and navigation bars. Exploring display: flex; helped me organize the content and make the layout more responsive.

The part I found most useful was learning how small design choices, such as consistent spacing and matching colors, can make a website feel more organized. I hope to continue using Flexbox, responsive media queries, and CSS selectors in future designs.
